

CSIT115 Data Management and Security

SELECT Statement (2)

Dr Janusz R. Getta

School of Computing and Information Technology -
University of Wollongong

SELECT statement (2)

Outline

Queries with simple conditions

Queries with Boolean expressions

Set algebra queries

Sorting

Queries about lack of values (NULLs)

Grouping

Grouping with selections

Queries with simple conditions

Sample database

```
CREATE TABLE DEPARTMENT(  
  name          VARCHAR(50)          NOT NULL,  
  code          CHAR(5)              NOT NULL,  
  total_staff_number DECIMAL(2)      NOT NULL,  
  chair         VARCHAR(50)          NULL,  
  budget        DECIMAL(9,1)         NOT NULL,  
  CONSTRAINT dept_pkey PRIMARY KEY(name),  
  CONSTRAINT dept_cke1 UNIQUE(code),  
  CONSTRAINT dept_cke2 UNIQUE(chair),  
  CONSTRAINT dept_check1 CHECK (total_staff_number BETWEEN 1 AND 50) );
```

CREATE TABLE statement

```
CREATE TABLE COURSE(  
  cnum          CHAR(7)              NOT NULL,  
  title         VARCHAR(200)         NOT NULL,  
  credits       DECIMAL(2)           NOT NULL,  
  offered_by    VARCHAR(50)          NULL,  
  CONSTRAINT course_pkey PRIMARY KEY(cnum),  
  CONSTRAINT course_check1 CHECK (credits IN (6, 12)),  
  CONSTRAINT course_fkey1 FOREIGN KEY(offered_by)  
    REFERENCES DEPARTMENT(name) ON DELETE CASCADE );
```

CREATE TABLE statement

Queries with simple conditions

Find the titles of all 6 credit points courses

```
SELECT title  
FROM COURSE  
WHERE credits = 6;
```

SELECT statement with a simple equality condition

Find the titles of all 6 or 12 credit points courses

```
SELECT title  
FROM COURSE  
WHERE credits IN (6, 12);
```

SELECT statement with a set membership IN operation

Find the titles and numbers of all courses that have a word "database" in its title

```
SELECT title, cnum  
FROM COURSE  
WHERE UPPER(title) LIKE '%DATABASE%';
```

SELECT statement with a pattern matching operation LIKE

SELECT statement (2)

Outline

Queries with simple conditions

Queries with Boolean expressions

Set algebra queries

Sorting

Queries about lack of values (NULLs)

Grouping

Grouping with selections

Queries with Boolean expressions

Find the titles of all 6 credit points courses offered by a department of Physics

```
SELECT title
FROM COURSE
WHERE (credits = 6) AND (offered_by = 'Physics');
```

SELECT statement with a Boolean expression

Find the titles of all 6 credit points courses or the titles of all courses offered by a department of Physics

```
SELECT title
FROM COURSE
WHERE (credits = 6) OR (offered_by = 'Physics');
```

SELECT statement with a Boolean expression

Find the titles of all 6 credit points courses that are not offered by a department of Physics

```
SELECT title
FROM COURSE
WHERE NOT (offered_by = 'Physics') AND (credits = 6);
```

SELECT statement with a Boolean expression

Queries with Boolean expressions

Find the titles of all 6 credit points courses that are not offered by a department of Physics

```
SELECT title  
FROM COURSE  
WHERE (offered_by != 'Physics') AND (credits = 6);
```

SELECT statement with a Boolean expression

Queries with Boolean expressions

Find the titles of all courses offered by a department of Physics **or** offered by a department of Mathematics

SELECT statement with a Boolean expression

```
SELECT title
FROM COURSE
WHERE (offered_by = 'Physics') OR (offered_by = 'Mathematics');
```

SELECT statement with set membership operation IN (equivalent to a statement above)

```
SELECT title
FROM COURSE
WHERE offered_by IN ('Physics', 'Mathematics');
```

Find the same titles of all courses offered by a department of Physics **and** offered by a department of Mathematics

SELECT statement with a correct Boolean expression

```
SELECT title
FROM COURSE
WHERE (offered_by = 'Physics') AND (offered_by = 'Mathematics');
```

- **WRONG !!!**

SELECT statement (2)

Outline

Queries with simple conditions

Queries with Boolean expressions

Set algebra queries

Sorting

Queries about lack of values (NULLs)

Grouping

Grouping with selections

Set algebra queries

Set operations: UNION, INTERSECTION, and DIFFERENCE

A UNION B: all elements in A **or** in B

A INTERSECTION B: all elements in A **and** in B

A DIFFERENCE B: all elements in A **and not** in B

B DIFFERENCE A: all elements in B **and not** in A

Set algebra queries

UNION operation

Find the credit points of courses offered by a department of Physics or a department of Mathematics and **do not list duplicated rows**

SELECT statement with a Boolean expression

```
SELECT DISTINCT credits
FROM COURSE
WHERE (offered_by = 'Physics') OR (offered_by = 'Mathematics');
```

SELECT statement with a set operation UNION (equivalent to a statement above)

```
SELECT credits
FROM COURSE
WHERE offered_by = 'Physics'
UNION
SELECT credits
FROM COURSE
WHERE offered_by = 'Mathematics';
```

UNION operation automatically eliminates duplicated rows !!!

Set algebra queries

UNION ALL operation

Find the credit points of courses offered by a department of Physics or a department of Mathematics

SELECT statement with a Boolean expression

```
SELECT credits
FROM COURSE
WHERE (offered_by = 'Physics') OR (offered_by = 'Mathematics');
```

SELECT statement with a set operation UNION ALL (equivalent to a statement above)

```
SELECT credits
FROM COURSE
WHERE offered_by = 'Physics'
UNION ALL
SELECT credits
FROM COURSE
WHERE offered_by = 'Mathematics';
```

UNION operation does **NOT** eliminate duplicated rows !!!

Set algebra queries

What about other set operations like **intersection** (`INTERSECT`) and **difference** (`MINUS`) ?

MySQL does not implement `INTERSECT` and `MINUS` set operations :(!!!

So, how do we implement in MySQL queries with `INTERSECT` and `MINUS` set operations ?

Find the credit points that **can be earned both for a course offered by Physics and for a course offered by Mathematics**

Nested SELECT statement that implements INTERSECT operation

```
SELECT DISTINCT credits
FROM COURSE
WHERE offered_by = 'Physics' AND
      credits IN (SELECT credits
                  FROM COURSE
                  WHERE offered_by = 'Mathematics');
```

Set algebra queries

What about other set operations like **intersection** (`INTERSECT`) and **difference** (`MINUS`) ?

MySQL does not implement `INTERSECT` and `MINUS` set operations :(!!!

So, how do we implement in MySQL queries with `INTERSECT` and `MINUS` set operations ?

Find the credit points that can be earned for a course offered by Physics and cannot be earned for a course offered by Mathematics

Nested SELECT statement that implements MINUS operation

```
SELECT DISTINCT credits
FROM COURSE
WHERE offered_by = 'Physics' AND
      credits NOT IN (SELECT credits
                      FROM COURSE
                      WHERE offered_by = 'Mathematics');
```

SELECT statement (2)

Outline

Queries with simple conditions

Queries with Boolean expressions

Set algebra queries

Sorting

Queries about lack of values (NULLs)

Grouping

Grouping with selections

Sorting

Sorting re-orders the rows in the results if a query

```
SELECT *  
FROM TABLE_NAME  
ORDER BY COLUMN_1 ASC;
```

TABLE_NAME

COLUMN_1	COLUMN_2	...	COLUMN_N
		...	
		...	
		...	

RESULT

COLUMN_1	COLUMN_2	...	COLUMN_N
		...	
		...	
		...	

Sorting

Find the numbers and titles of all 6 credit points courses sorted in the ascending order of titles

SELECT statement that sorts the results in the ascending order of the values in the title column

```
SELECT cnum, title  
FROM COURSE  
WHERE credits = 6  
ORDER BY title ASC;
```

SELECT statement that sorts the results in the ascending order of the values in the title column

```
SELECT cnum, title  
FROM COURSE  
WHERE credits = 6  
ORDER BY 2 ASC;
```

Sorting

Find the numbers and titles of all 6 credit point courses sorted in a descending order of titles

SELECT statement that sorts the results in the descending order of the values in the title column

```
SELECT cnum, title
FROM COURSE
WHERE credits = 6
ORDER BY title DESC;
```

SELECT statement that sorts the results in the descending order of the values in the title column

```
SELECT cnum, title
FROM COURSE
WHERE credits = 6
ORDER BY 2 DESC;
```

Sorting

Find the numbers, titles, and credits of all courses sorted in an ascending order of credits and for all courses with the same credits sorted in descending order by titles

SELECT statement that sorts the results in the ascending order of the values in the credits column and in the descending order in the title column

```
SELECT cnum, title, credits
FROM COURSE
ORDER BY credits ASC, title DESC;
```

SELECT statement that sorts the results in the ascending order of the values in the credits column and in the descending order in the title column

```
SELECT cnum, title, credits
FROM COURSE
ORDER BY 3 ASC, 2 DESC;
```

SELECT statement (2)

Outline

Queries with simple conditions

Queries with Boolean expressions

Set algebra queries

Sorting

Queries about lack of values (NULLs)

Grouping

Grouping with selections

Queries about lack of values (NULLs)

Find the titles of all courses which are not offered now

Query about lack of value

```
SELECT title
FROM COURSE
WHERE offered_by IS NULL;
```

Incorrect query about lack of value

```
SELECT title
FROM COURSE
WHERE offered_by = NULL;
```

- **WRONG !!!** Lack of value cannot be compared with a value

Queries about lack of values (NULLs)

Find the titles of all courses offered now

```
SELECT title
FROM COURSE
WHERE offered_by IS NOT NULL;
```

Query about existence of value

```
SELECT title
FROM COURSE
WHERE offered_by <> NULL;
```

Incorrect query about existence of value

- **WRONG !!!** Lack of value cannot be compared with a value

SELECT statement (2)

Outline

Queries with simple conditions

Queries with Boolean expressions

Set algebra queries

Sorting

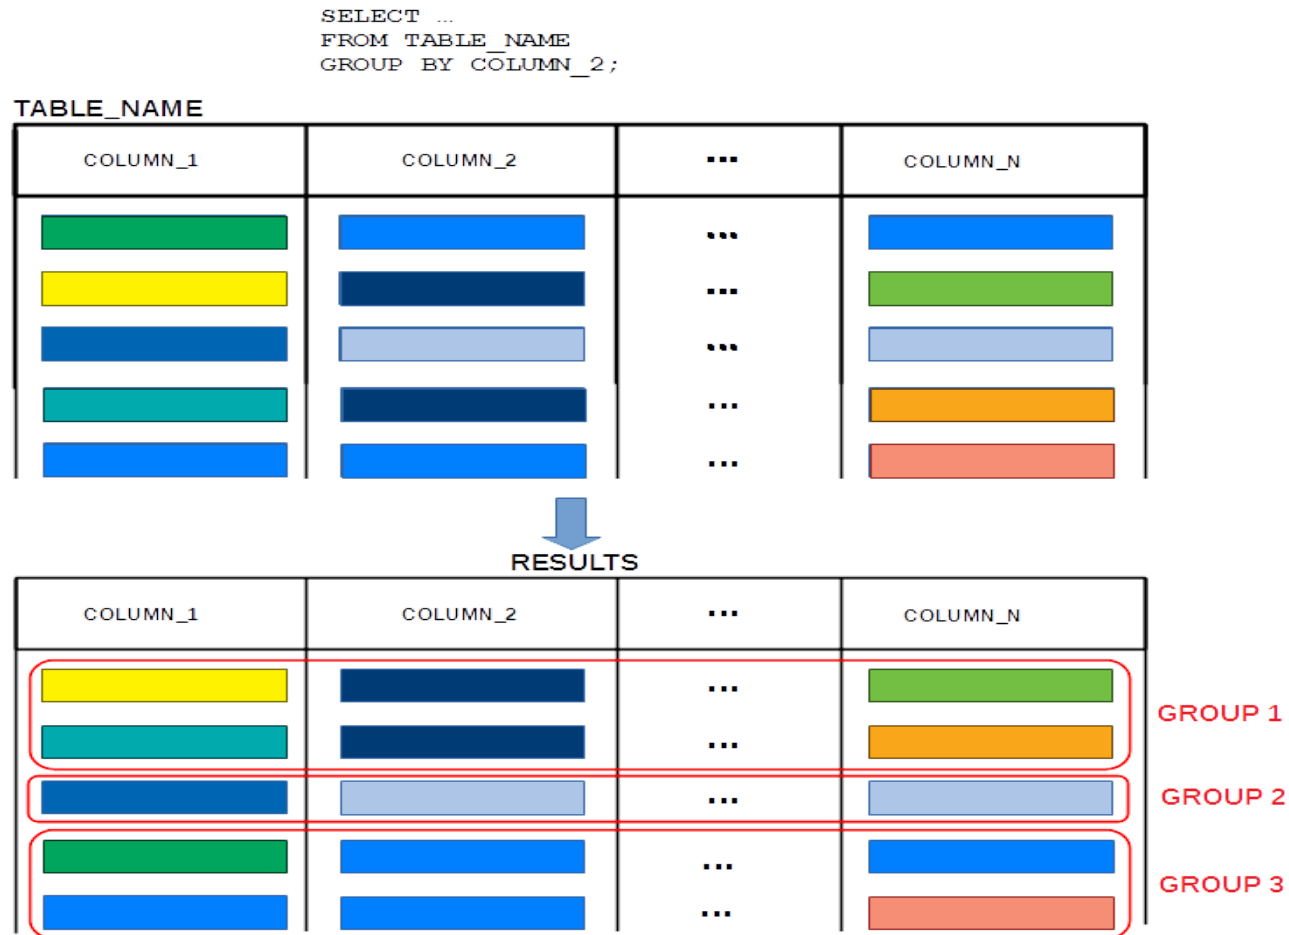

Queries about lack of values (NULLs)

Grouping

Grouping with selections

Grouping

Grouping groups the rows before application of group functions

Grouping

Find the names of all departments that offer at least one course, do not list the same names of departments

```
SELECT DISTINCT offered_by  
FROM COURSE;
```

SELECT statement with DISTINCT clause

```
SELECT offered_by  
FROM COURSE  
GROUP BY offered_by;
```

SELECT statement with GROUP BY clause

GROUP BY sorts a relational table over the attributes included in **GROUP BY** list and creates the groups of rows with identical values of the attributes in **GROUP BY** list

In the example above a table **COURSE** is sorted over the values of an attribute **offered_by**

The groups of rows with the identical values of an attribute **offered_by** are created

Finally, the values of an attribute **offered_by** are selected, one value from each group

Grouping

Grouping allows for application of **group functions** to each group created by **GROUP BY** clause

Find the names of all departments together with the total number of all courses offered by each department

SELECT statement with GROUP BY clause and aggregation function COUNT

```
SELECT offered_by, COUNT(*)  
FROM COURSE  
GROUP BY offered_by;
```

- Before sorting

Temporary results after selection

cnum	title	credits	offered_by
CSCI111	C++	6	Computer Science
PHYS312	Relativity	6	Physics
MATH111	Calculus	12	Mathematics
CSCI235	Databases	6	Computer Science
MECH111	Mechanics	12	Physics

Grouping

Grouping allows for application of **group functions** to each group created by **GROUP BY** clause

Find the names of all departments together with the total number of all courses offered by each department

SELECT statement with GROUP BY clause and aggregation function COUNT

```
SELECT offered_by, COUNT(*)  
FROM COURSE  
GROUP BY offered_by;
```

- After grouping by **offered_by**

Temporary results after grouping

cnum	title	credits	offered_by
CSCI111	C++	6	Computer Science
CSCI235	Databases	6	Computer Science
MATH111	Calculus	12	Mathematics
MECH111	Mechanics	12	Physics
PHYS312	Relativity	6	Physics

Grouping

Grouping allows for application of **group functions** to each group created by **GROUP BY** clause

Find the names of all departments together with the total number of all courses offered by each department

SELECT statement with GROUP BY clause and aggregation function COUNT

```
SELECT offered_by, COUNT(*)  
FROM COURSE  
GROUP BY offered_by;
```

- After counting rows in each group

Final results after grouping and application of aggregation function COUNT

offered_by	count(*)
Computer Science	2
Mathematics	1
Physics	2

Grouping

For each value of credit points find the total number of courses that have the respective credits

SELECT statement with GROUP BY clause and aggregation function COUNT

```
SELECT credits, COUNT(*)  
FROM COURSE  
GROUP BY credits;
```

For each department find the total number of credit points offered

SELECT statement with GROUP BY clause and aggregation function SUM

```
SELECT offered_by, SUM(credits)  
FROM COURSE  
GROUP BY offered_by;
```

Find the largest number of courses offered by any department

SELECT statement with GROUP BY clause and aggregation functions COUNT and MAX

```
SELECT MAX(total)  
FROM (SELECT COUNT(*) total  
      FROM COURSE  
      GROUP BY offered_by) T;
```

SELECT statement (2)

Outline

Queries with simple conditions

Queries with Boolean expressions

Set algebra queries

Sorting

Queries about lack of values (NULLs)

Grouping

Grouping with selections

Grouping with selections

Find the names of all departments that offer more than 1 course

SELECT statement with GROUP BY clause and aggregation function COUNT

```
SELECT offered_by, COUNT(*)  
FROM COURSE  
GROUP BY offered_by;
```

Final results after grouping and application of aggregation function COUNT

offered_by	count(*)
Computer Science	2
Mathematics	1
Physics	2

Grouping with selections

Find the names of all departments that offer more than 1 course

SELECT statement with GROUP BY and HAVING clauses and aggregation function COUNT

```
SELECT offered_by, count(*)  
FROM COURSE  
GROUP BY offered_by  
HAVING count(*) > 1;
```

Final results after grouping, application of aggregation function COUNT, and HAVING clause

offered_by	count(*)
Computer Science	2
Physics	2
